AUTOTRANSFORMER

Note: "FB" version has an internal auto reset 110°C thermal protector in series with the "RED" input lead.

"EB" version does not have an internal fuse.

INSTALLATION INSTRUCTIONS:

Mechanical: This transformer is typically used for external assembly to a fixture enclosure.

- Remove the metal lock-nut from the threaded nipple.
- Insert the threaded nipple and the lead-wires through a hole or standard knock-out in the fixture enclosure.
- Secure the transformer inside of the enclosure using the lock-nut on the threaded nipple; hand tighten.
- Note: Take care not to over-tighten the lock-nut to avoid damage to the housing.

Electrical: Connect the Red/White leads to the Supply and the Black/White leads to the Load per the AUTOTRANSFORMER drawing above.

- Note that the "White" lead is the Neutral and is common to both the Input Supply and Output to Load.
